## **DETAILED ACTION**

### ***Specification***

1. The disclosure is objected to because of the following informalities: The specification, including the claims, contain grammatical errors. In the specification at page 3 line 24 “It is therefore object of” and in claim 4 line 3 “larger cross section alternated to” are two examples where the grammar needs correction.

Appropriate correction is required.

### ***Claim Rejections - 35 USC § 102***

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1, 2, and 7-13 are rejected under 35 U.S.C. 102(b) as being anticipated by Kramer et al.

The device as claimed is disclosed by Kramer et al with a device for measuring the relative orientations of various portions of an object (including human features) with at least one goniometric sensor and at least one constraint generator for each goniometric sensor where the constraint generator being a flexible elongated element with a low flexional stiffness in a first plane and high flexional stiffness in a second plane orthogonal to the first plane as well as having high stiffness to torsion and tensile stress (see col. 8 lines 46-57 as well as the figures).

### ***Allowable Subject Matter***

Art Unit: 2859

4. Claims 3-6 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
